

Intepro Systems Reaffirms Commitment to Service

Intepro Systems America, LP acknowledges global support services

For Release On: 03/01/2022

***Intepro Systems** reaffirms its longstanding commitment to supporting both new systems and legacy products for new and existing clients, while offering a plethora of support services throughout the world for some of the most demanding test applications.*

“Intepro Systems engineers have been building test stations to last through your test projects and years to come. We can build a new test system or evaluate your existing system and provide a cost-efficient upgrade to meet new testing requirements. Since we have open hardware and software architecture, we can upgrade older, legacy systems to the latest hardware and software. We take pride in our ability to build and support new and legacy equipment from a variety of sources and implement them for your current testing needs.” According to Chris Palmer, Global Service Manager.

From initial installation to ongoing maintenance of test equipment, our engineers can provide short term and ongoing training and project management to help you get the most from your equipment and your relationship with Intepro Systems. We offer everything from ongoing maintenance contracts, upgrades, project management to full calibration services, Intepro can help ensure your equipment is operational and meets the needs of your application.

Intepro offers a variety of maintenance support contracts providing telephone and online support, advanced module replacement and on-site service, Intepro provides after sales maintenance support that meets our customers’ own support budgets and requirements.

For more information about our support services please: contact our support department at support@inteproate.com or visit our website at <https://www.inteproate.com/support>

About Intepro Systems:

Since 1981, Intepro has supplied Automated Test systems to manufacturers all over the world to test power electronics used in a wide range of applications. Our knowledge and expertise in moving and measuring power makes our systems unparalleled for characterization of power components, environmental stress screening, production test and repair across all industries.
